

EMERGENCY VEHICLE PRE-EMPTION SYSTEM

Green Corridor - Green to Scene

EXPERIENCE THE GLANCE SYSTEM

Green to Scene™

Vehicle crashes accounted for over 25% of firefighter fatalities in 2017. Proactively clearing traffic and bringing the rest of the intersection to a halt can help prevent these crashes.

Faster Response Times

Adaptive preemption and priority systems clear traffic ahead of a vehicle's arrival, which can reduce response times by as much as 20%.

Easy Install

The Glance system is easy to install and maintain. Hardware retrofits into existing cabinets and self-locates for quick set-up.

Next Generation Technology

Glance powers the system with a combination of cellular and GPS technology, making it more efficient than optical systems.

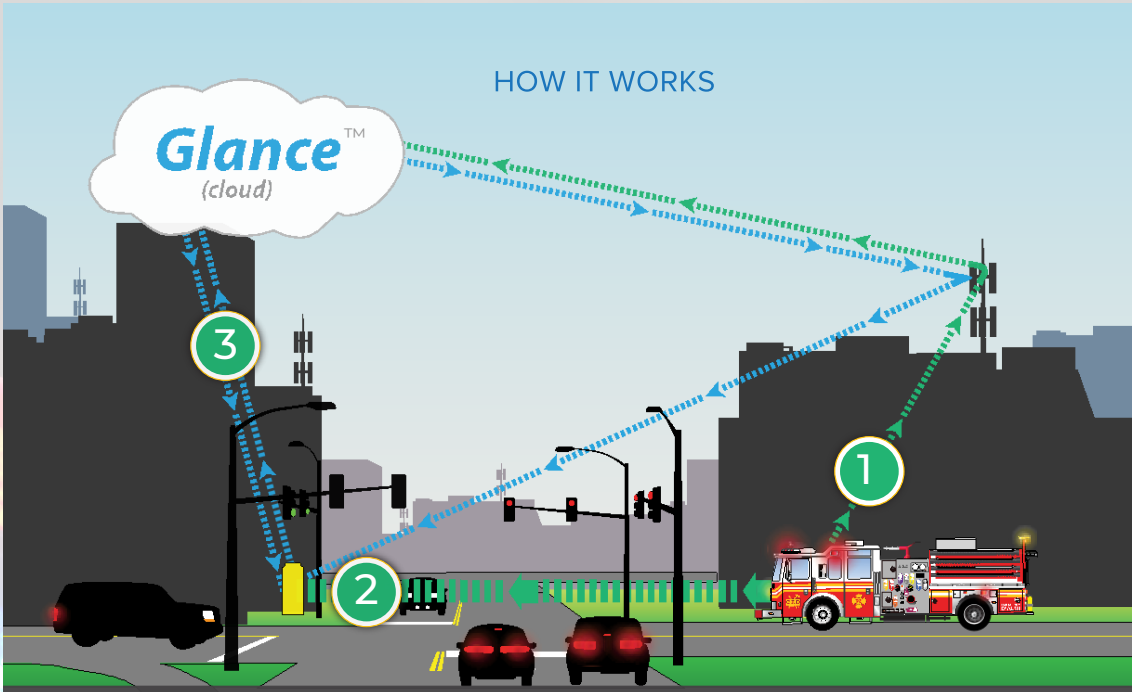

Improve Your ISO Rating

Response times are a critical component of ISO ratings. With Glance, you can help improve your score to benefit citizens and fire departments alike.

HOW IT WORKS

1. Notify
2. Preempt
3. Adapt

WATCH NOW

In - Cabinet Unit

Glance tracks all emergency response trips and automatically calculates the average response time, 90th percentile response time, and availability of every vehicle.
